#### **FOREWORD**

This Specification has been prepared by the Standards Department and Technical Services Department both of The Kenya Power and Lighting Company Plc. (KPLC) and it lays down requirements for 36 kV Current Transformers.

The 36kV Current Transformers are intended for use with electrical measuring instruments and electrical protective devices.

There are no specifications in this series.

This Specification stipulates the minimum requirements for 36 kV Current Transformers acceptable for use in KPLC power system. It shall be the responsibility of the supplier and manufacturer to ensure that the offered design is of the highest quality and guarantees excellent service to KPLC, ensure good workmanship and good engineering practice in the manufacture of the 36 kV Current Transformers.

Users of this Kenya Power Specification are responsible for its correct interpretation and application.

The following are members of the technical team that developed this specification:

Name	Department
Eng. Paul Mwangi	Technical Services
Eng. Wachira Kahoro	Technical Services
Nancy Wairimu	Standards

Issued by: Head of Section, Standards Development	Authorized by: Head of Department, Standards
Signed:	Signed:

Date of Issue	2021-05-25
Page 5 of 18	

#### 1. SCOPE

- 1.1. This Specification is for newly manufactured 36kV Current Transformers for use with electrical measuring instruments and electrical protective devices for system highest voltage of 36 kV at power frequency of 50Hz.
- 1.2. The Specification covers general requirements, design, construction, technical parameters, inspection and tests, and schedule of Guaranteed Technical Particulars of 36kV Current Transformers.

#### 2. NORMATIVE REFERENCES

The following standards contain provision which, through reference in this text, constitute provisions of this specification. For dated editions the cited edition will apply; for undated editions the latest edition of the referenced document shall apply.

IEC 61869-1:

Instrument Transformers - Part 1: General Requirements

IEC 61869-2:

Instrument Transformers- Part 2: Additional Requirements for

Current Transformers.

IEC 60417:

Graphical Symbols for use on equipment.

IEC 60296:

Fluids for Electrotechnical applications - Mineral Insulating Oil

for Electrical Equipment

IEC 60529:

Degrees of protection provided by enclosures (IP code).

IEC/TS 60815:

Selection and dimensioning of high voltage insulators intended

for use in polluted conditions.

ISO 9001:2015

Quality Management System - Requirements

KP1/6C.1/13/TSP/08/001:

Specification for Mineral Insulating oil (Transformer &

Switchgear oil)

#### 3. DEFINITIONS AND ABBREVIATIONS

For the purpose of this Specification, the definitions and abbreviations given in the reference standards shall apply together with the following:

#### 3.1. ABBREVIATIONS

KPLC:

Kenya Power and Lighting Company Plc.

IEC:

International Electrotechnical Commission

ISO:

International Organization for Standardization.

CTs:

**Current Transformers**

Date of Issue	2021-05-25
Page 6 of 18	

#### 4. REQUIREMENTS

### 4.1. SERVICE CONDITIONS

- 4.1.1 The 36kV Current Transformers shall be suitable for continuous use outdoors in tropical areas and harsh climatic conditions including areas exposed to:
  - a) Altitudes of up to 2200m above sea level;
  - b) Humidity of up to 95%;
  - c) Average ambient temperature of +30°C with a minimum of -1°C and a maximum of +45°C
  - d) Pollution: Design pollution level to be taken as "Very Heavy" (Pollution level IV) for inland in accordance with IEC 60815.
  - e) Isokeraunic level: 180 thunderstorm days per year
- 4.1.2 36kV Current Transformers shall be connected to overhead system that is generally of earthed construction i.e. with continuous aerial earth wire and with the neutral point Solidly grounded.

#### 4.2. MATERIAL, DESIGN AND CONSTRUCTION

- 4.2.1. The current transformer (CT) shall be designed and manufactured to IEC 61869-1 & 2 and the requirements of this specification.
- 4.2.2. All materials used shall be new and of the best quality and of the class most suitable for working under the conditions specified and shall withstand the variations of temperatures and atmospheric conditions arising under working conditions without undue distortion or deterioration or the setting up of undue stresses in any part, and also without affecting the strength and suitability of the various parts for the work which they have to perform.
- 4.2.3. The design shall ensure satisfactory operation under such sudden variations of load and voltage as may be met with under working conditions on the system, including those due to short circuits conditions.
- 4.2.4. All parts of the transformer, including insulators with their mountings, shall be designed so as to avoid pockets in which water can collect.
- 4.2.5. The current transformer shall be outdoor; oil insulated and hermetically sealed type. The insulator portion of the current transformer shall be made of high-grade brown-glazed porcelain.
- 4.2.6. The insulating oil shall be new, unused and shall comply with all the requirements of IEC 60296 and as per current KPLC specification KPLC/3CB/008/001. (This shall be attached during tender).
- 4.2.7. A device shall be provided for checking the oil level and shall indicate whether the oil level is within the operating range during operation.
- 4.2.8. The current transformer shall be effectively sealed to prevent liquid loss, as this would lead to contamination of the insulation.
- 4.2.9. The current transformer shall be suitable for vertical installation on a steel structure.
- 4.2.10. All parts and components of the current transformer shall be resistant to atmospheric corrosion, during the service life. The visual appearance shall remain acceptable. The current transformer

Page 7 of 18	1

paint work shall be protected from weathering due to atmospheric conditions and ultra-violet radiation.

- 4.2.11. The current transformer shall have primary, secondary and earth terminals.
- 4.2.12. Primary Terminal
- 4.2.12.1. The primary terminal shall be of high conductivity copper, tin-plated, suitable for connection of both copper and aluminium conductors.
- 4.2.12.2. It shall have palm clamp connectors suitable for both stranded conductor and tube connection.
- 4.2.12.3. Conductor overall diameter shall be of between 18.3mm to 25mm and busbar tubes of 76.2mm diameter.

#### 4.2.13. Secondary Terminals

- 4.2.13.1. The secondary terminals of the current transformer shall be wired to a terminal box and earthed at one point.
- 4.2.13.2. The terminal box shall be weatherproof with a cable plate at the bottom and shall be covered with removable plate.
- 4.2.13.3. The terminal box shall be capable of accommodating all the secondary terminals each suitable for conductor size of up to 3.2mm diameter.
- 4.2.13.4. The degree of protection of enclosure of the secondary terminal box shall be at least IP54 according to IEC 60529.
- 4.2.14. The Primary and Secondary terminals shall be marked in accordance with IEC 61869-2.
- 4.2.15. The Frame of the Current Transformer shall be provided with a reliable earthing terminal for connection to an earthing conductor suitable for specified fault condition. The connection point shall be marked with the "earth symbol" as indicated by the symbol No. 5019 of IEC 60417.
- 4.2.16. The current transformer top oil temperature rise shall not exceed 55°C, while the winding average temperature rise shall not exceed 65°C.
- 4.2.17. The Maximum Partial Discharge shall be 10pC.
- 4.2.18. The current Transformer shall be able to withstand Internal Arc of 31.5kA for 0.3 s in accordance with the requirements of IEC 61869-1.
- 4.2.19. The Current transformer shall be of sufficient mechanical strength. In particular the Current Transformer top cover shall be strong so as to withstand any flying debris resulting from failure of porcelain housing of other nearby equipment in the substation.

- 4.2.20. The current transformer shall have cores as per clause 4.3. The ratio selection shall be done on the secondary side.
- 4.2.21. The protection cores shall be suitable for conventional overcurrent and for true transformation of the fully asymmetrical fault currents.

#### 4.3. RATINGS

The ratings of the 36kV Current Transformers shall be as indicated in the tables below:

Table 1: Ratings

#### 5. TESTS REQUIREMENTS

The 36kV Current Transformers shall be inspected and tested in accordance with the requirements of IEC 61869-1 & 2 and provision of this specification.

#### 6. MARKING AND PACKAGING

- 6.1 The 36kV current transformer shall be fitted with a permanent rating plate indicating the following:
  - a) The manufacturer's name and identification mark;
  - b) The type reference number and serial number;
  - c) The year of manufacture;
  - d) The rated primary and secondary current;
  - e) The rated frequency;
  - f) The rated output and the corresponding accuracy class of the cores;
  - g) The highest voltage of equipment;
  - h) The rated insulation level;
  - i) The class of insulation;
  - j) The short-time current ratings and time;
  - k) The rated continuous thermal current;

- l) Requirements for Class PX rated turns ratio, the rated knee point e.m.f., the upper limit of exciting current ( $I_e$ )at rated knee point e.m.f. and the upper limit of secondary winding resistance ( $R_{ct}$ ).
- All the marking shall be by engraving (or superior method) and shall be permanent and legible.
- 6.2 The terminals shall be marked clearly and indelibly and in accordance with IEC  $61869-1\ \&\ 2$  . The terminal marking shall consist of letters followed by numbers. The letters shall be in block capitals.
- 6.3 The 36kV Current Transformers shall be delivered packed in wooden crates firmly bound together to avoid damage during transportation and storage.
- 6.4 A set of three (3) original installation and technical manuals for the Current Transformers shall be supplied with the equipment.

#### **APPENDICES**

#### APPENDIX A: TESTS AND INSPECTION (NORMATIVE)

- A.1 It shall be the responsibility of the supplier to test or to have all the relevant tests performed.
- A.2 Copies of Type Test Certificates and Type Test Reports issued by a third party testing laboratory that is accredited to ISO/IEC 17025 shall be submitted with the tender for the purpose of technical evaluation. A copy of the accreditation certificate for the testing laboratory clearly stating the scope of accreditation shall also be submitted with the tender (all in English Language).

Copies of type test reports to be submitted with the tender for evaluation shall be as stated below:

- a) Short-time current tests;
- b) Temperature rise test;
- c) Lightning impulse test on primary terminals (with both positive and negative polarity fifteen consecutive impulses of each polarity);
- d) Wet test for outdoor type transformers;
- e) Enclosure tightness test at ambient temperature
- f) Verification of the degree of protection by enclosures
- g) Capacitance and dielectric dissipation factor;
- h) Chopped lightning impulse withstand test;
- i) Partial discharge test;
- j) Transmitted overvoltage test;
- k) Mechanical test;
- l) Electromagnetic compatibility test;
- m) Test of Accuracy.

NOTE: Any translations of certificates and test reports into English language shall be signed and stamped by the Testing Authority.

- A.3 At the company's (Kenya Power) discretion, our Engineers shall witness tests at the factory before shipment. Tests to be witnessed by KPLC Engineers at the factory before shipment/delivery shall be in accordance with IEC 61869-2 and this specification and shall include the following:
  - a) Verification of markings;
  - b) Visual inspection;
  - c) Power-frequency withstand test on primary winding;
  - d) Partial discharge measurement;
  - e) Power-frequency withstand tests on secondary winding;
  - f) Power-frequency withstand tests between sections;
  - g) Inter-turn overvoltage test;
  - h) Measurement of Capacitance and dielectric dissipation factor;
  - i) Partial discharge test;
  - j) Test for accuracy;
  - k) Test for rated knee point e.m.f., maximum exciting current, secondary winding resistance and turns ratio of class PX Current Transformers.
  - l) Enclosure Tightness Test at ambient temperature.

Issued by: Head of Section, Standards Development	Authorized by: Head of Department, Standards

Page 12 of 18	

- A.4 Routine and sample test reports for the 36 kV Current Transformers to be supplied shall be submitted to KPLC for approval before supply/delivery.
- A.5 On receipt of the 36 kV Current Transformers, KPLC will inspect them and may perform any of the relevant tests in order to verify compliance with the specification. The supplier shall replace without charge to KPLC, any current transformer which upon examination, test or use fail to meet any or all of the requirements in the specification.

# APPENDIX B: QUALITY MANAGEMENT SYSTEM (Normative)

- B.1 The supplier shall submit a quality assurance plan (QAP) that will be used to ensure that the 36kV Current Transformers physical properties, tests and documentation, will fulfill the requirements stated in the contract documents, standards, specifications and regulations. The QAP shall be based on and include relevant parts to fulfill the requirements of ISO 9001:2015.
- B.2 The Manufacturer's Declaration of Conformity to applicable standards and copies of quality management certifications including copy of valid and relevant ISO 9001:2015 certificate shall be submitted with the tender for evaluation.

### APPENDIX C: DOCUMENTATION (Normative)

- C.1 The bidder shall submit its tender complete with technical documents for tender evaluation. The technical documents to be submitted (all in English language) for tender evaluation shall include the following:
  - a) Fully filled clause by clause guaranteed technical particulars (GTP) signed and stamped by the manufacturer;
  - b) Copies of the Manufacturer's catalogues, brochures, drawings giving all relevant dimensions and technical data:
  - c) Sales records for the last five years and at least four customer reference letters;
  - d) Details of manufacturing capacity and the manufacturer's experience;
  - e) Copies of required type test reports by a third party testing laboratory accredited to ISO/IEC 17025. The test reports shall not be more than five years old;
  - f) Copy of accreditation certificate to ISO/IEC 17025 for the third party testing laboratory;
  - g) Contacts and address of third party testing laboratory;
  - h) Manufacturers letter of authorization, ISO 9001:2015 certificate and other technical documents required in the tender.
  - i) Supplier/manufacturer's warranty and guarantee
- C.2 The successful bidder (supplier) shall submit the following documents/details to The Kenya Power & Lighting Company for approval before manufacture:
  - a) Fully filled clause by clause guaranteed technical particulars (GTP) stamped and signed by the manufacturer;
  - b) Design Drawings with details of the current transformer to be manufactured for KPLC;
  - c) Quality assurance plan (QAP) that will be used to ensure that the design, material; workmanship, tests, service capability, maintenance and documentation will fulfill the

requirements stated in the contract documents, standards, specifications and regulations. The QAP shall be based on and include relevant parts to fulfill the requirements of ISO 9001:2015:

- d) Marking details and method to be used in marking the 36 kV Current Transformers;
- e) Packaging details (including packaging materials).

**NOTE:** The drawings to be submitted by the supplier to KPLC for approval before manufacture shall be in standard format clearly indicating the drawing number, parts list with material details and quantities, standard of manufacture, ratings, approval details and identity of the manufacturer (as per manufacturer's authorization submitted during tendering).

- C.3. Instruction should be provided for Inspection and tests which should be carried out after the current transformer has been installed and after all connections are completed. These instructions should include:
  - a) A Schedule of Recommended site tests to establish correct operation
  - b) Procedures for carrying out any adjustment that may be necessary to obtain correct operation
  - c) Recommendations for any relevant measurements that should be made and recorded to help with future maintenance decisions.
  - d) Instructions for final inspection and putting the current transformer into service.

#### APPENDIX D: WARRANTY

- D.1. The supplier/manufacturer warrants the purchaser that all goods supplied shall have no defect arising from design, materials or workmanship.
- D.2. Supplier/manufacturer's warranty and guarantee: subject to 60 months from date of delivery to KPLC stores.

#### APPENDIX E: MANUFACTURER'S QUALIFICATION AND CAPACITY

- E.1. The current transformers manufacturer shall have a minimum of 25 years' experience in the manufacture of 36 kV Current Transformer.
- E.2. The current transformers on offer shall have been in service and given reliable service for a minimum period of 8 years in at least two (2) power utilities in at least three (3) of the following continents/regions:
  - a) Europe
  - b) North America
  - c) Africa
  - d) Asia or South America
- E.3. The current transformers manufacturer shall provide references to support these requirements including export records with copy of contractual letters, current transformer details and date of sale/export, letter of satisfaction from power utilities shall also be provided with the bid.
- E.4. Current transformers that have failed in service or mal-operated while in service on the Kenyan power system shall not be accepted.

4.2.13.2	Terminal box shall be weather-proof with cable plate at bottom		State compliance
4.2.13.3	Terminal box shall be capable of accommodating all the secondary terminals & conductor size of 3.2mm diameter		State
4.2.13.4	Degree of protection	IP54	State
4.2.14	Marking	Primary and Secondary terminals shall be marked in accordance with IEC 61869-2	State
4.2.15	Earthing terminal		
	Connection point symbol	the "earth symbol" as indicated by the symbol No. 5019 of IEC 60417	Provide State
4.2.16	Top oil temperature rise	< 55°C	State
	Winding average temperature rise	<65°C	State
4.2.17	Partial discharge	< 10pC	State
4.2.18	Internal Arc withstand	31.5 kA, 0.5 s	State
4.2.19	Current transformer id of suff		State
4.2.20	Ratio selection on the seconda		State
4.2.21	Protection cores suitable for conventional overcurrent and for true transformation of the fully asymmetrical fault currents		State
4.3	Ratings		
Table 1	Rated highest Voltage	36kV	State
	Minimum nominal specific creepage distance of insulator	31mm/kV	State
	Minimum creepage distance	1120mm	State
